# Before You Start

## Rules Used in This User Guide

This user guide is written based on the following rules.

### Program names

Program names are written as follows in this user guide.

- MagicInfo VideoWall Author → Author
- MagicInfo VideoWall Console → Console
- MagicInfo VideoWall i Player → i Player
- MagicInfo VideoWall S Player → S Player
- MagicInfo VideoWall Live Caster → Live Caster
- MagicInfo VideoWall Stream Repeater → Stream Repeater

### Opening a menu

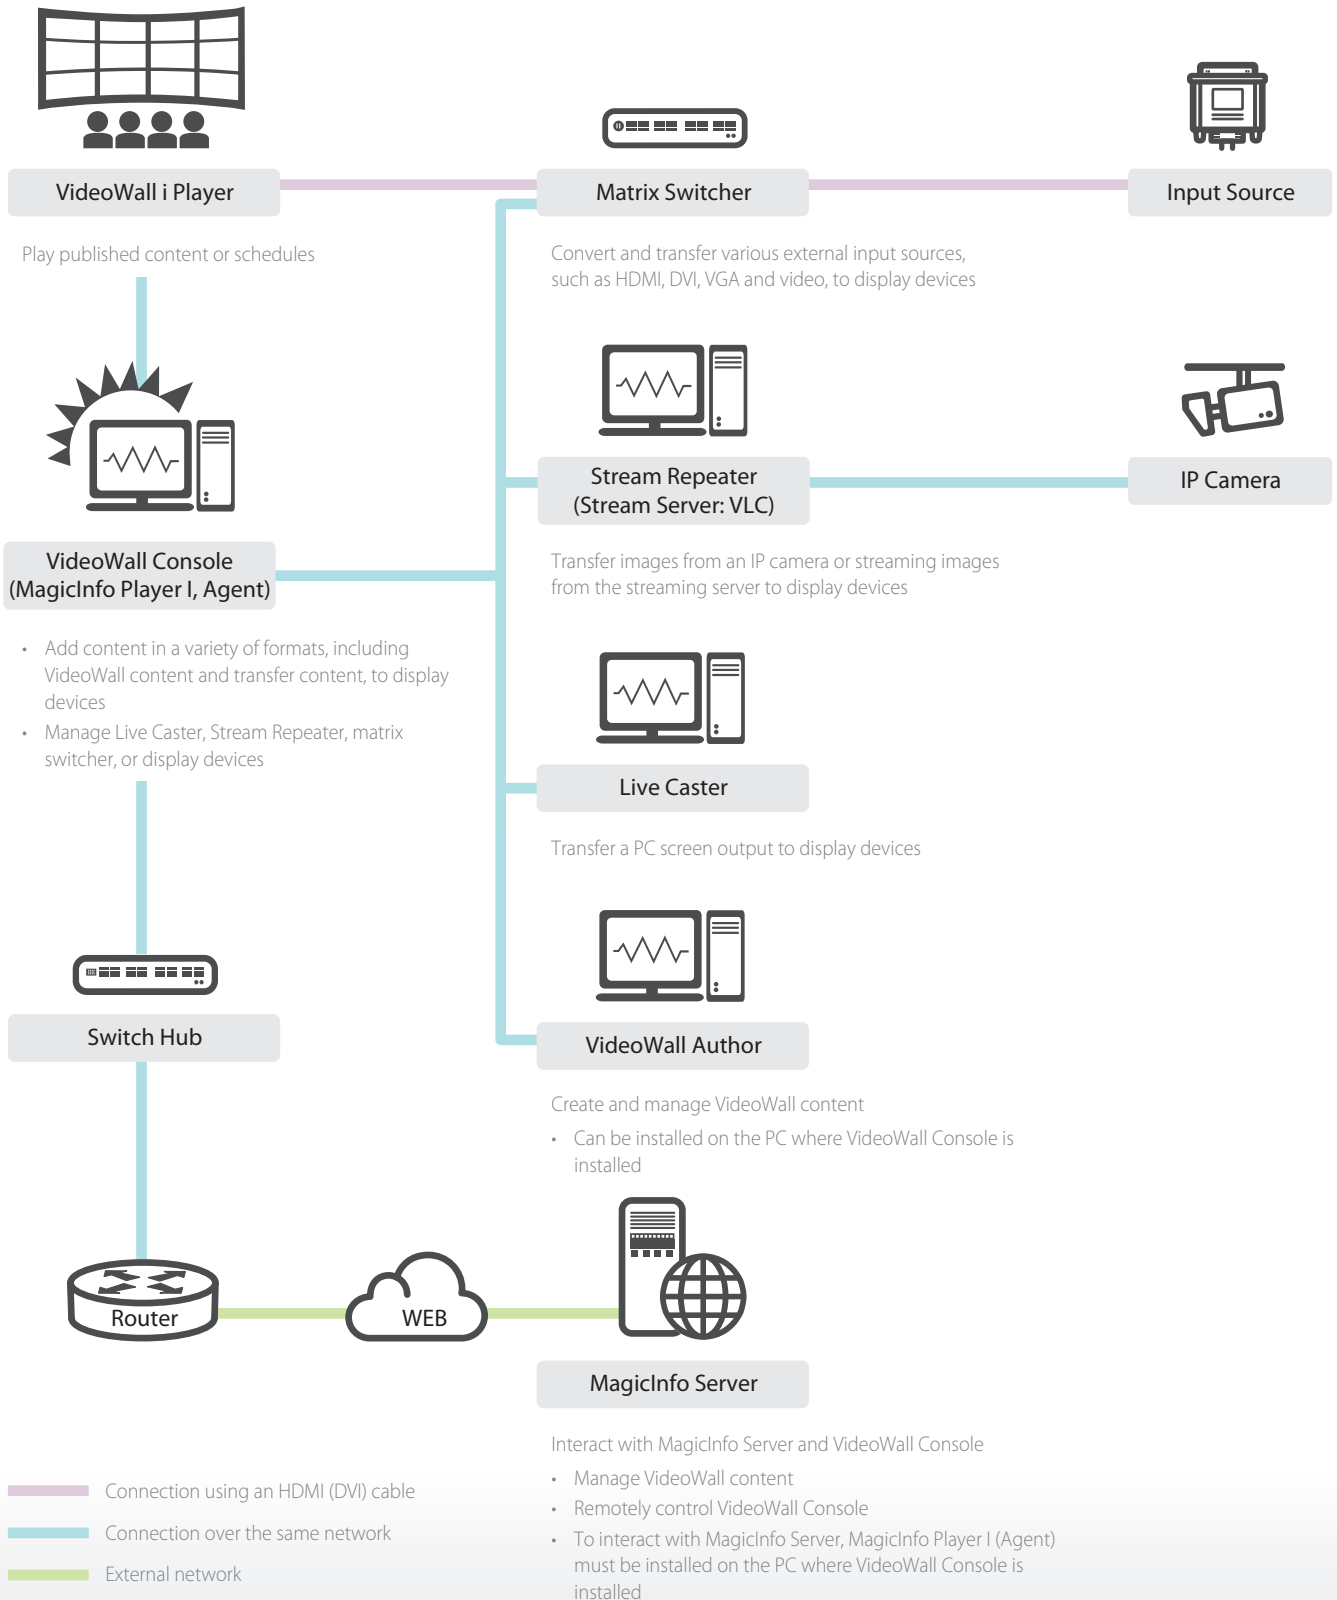

Instruction to open a menu is shown as follows:

Select **File > Create a new videowall** on the menu bar.

→ You should go to the **File** menu found at the top menu bar and then select the "**Create a new videowall**" option.

# MagicInfo VideoWall Structure

MagicInfo VideoWall Author is a program designed to construct a VideoWall layout and create VideoWall content by adding various elements to the layout. VideoWall content created using MagicInfo VideoWall Author can be published to MagicInfo Server or MagicInfo VideoWall Console.

# Key Features

MagicInfo VideoWall Author is a program designed to construct a VideoWall layout and create VideoWall content by adding various elements to the layout.

## Flexible VideoWall layout configuration

- Make a VideoWall made up of multiple display devices using various layouts.
- Conveniently construct a VideoWall using predefined VideoWall layout templates provided in the program.
- Customize a VideoWall layout to suit your preferences using the custom VideoWall layout feature.
- Group display devices of a VideoWall to manage the devices more conveniently.
- Using the Auto Frame Shuffle feature, play the same content on multiple display devices.
- Register previously created VideoWall layouts as templates to reuse.

## A wide variety of elements

- Mix and match various elements in the same page.
- Make creative VideoWall content using useful authoring elements such as images, videos, IP camera screen output, PC screen output, external input sources and streaming content.
- Resize or rearrange elements as desired.
- It is possible to arrange elements anywhere in a VideoWall layout without restrictions.
- Sync multiple elements to play them as a group.

## Creative page layout

- Construct VideoWall content with multiple pages.

## Timeline

- Using the timeline, conveniently configure the playing time settings for elements added to VideoWall content.
- The timeline allows you to control the playing time of an element up to 1/100 seconds.

## Convenient user interface to create content

- Cancel or restore tasks with ease.
- Conveniently move elements to desired locations by simply dragging and dropping.
- Zoom in/out on the content creation page to edit content in greater detail (zoom range: 10%-200%).
- Freely change the content creation page layout to suit your preferences.

# Installation Requirements

## Hardware

- CPU: Dual Core 2.5GHz or greater
- RAM: 2GB or greater
- DISK: 50 GB or greater

## Software

- Versions later than Internet Explorer 6.0
- Versions later than Microsoft DirectX 9.0

## Operating system

- Windows platform
- Windows(2000/2003/XP/Vista/7)

# Program Restrictions

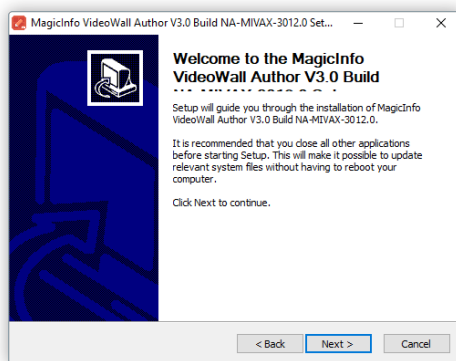

- Publish and play VideoWall content on a maximum of 250 display devices.
- The maximum number of pages for a VideoWall content file and the number of elements that can be inserted into a page are limited according to the PC memory capacity.
- It may take longer to complete the copy/paste command if multiple pages or elements are selected simultaneously or if the selected page contains many elements.
- To play content that has a video file inserted, ensure the appropriate playback codec for the file is installed.

# Installing/Uninstalling the Program

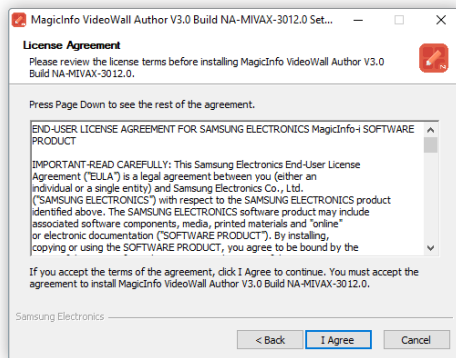

## Install

- 1 Run the program installer file. Select a language and click **OK**.

- 2 Read the instructions and click **Next** to continue.

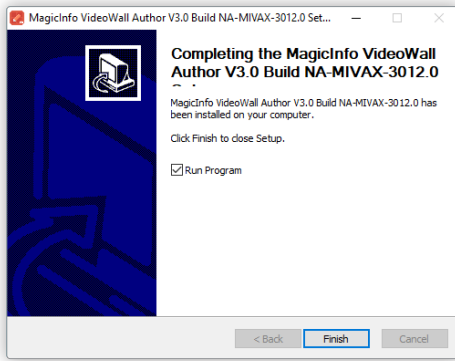

- 3 Read the terms and conditions of use thoroughly, and click **I Agree**.

- 4 Specify the destination folder to install the program. Click **Install**.

- 5 After the program install is complete, click **Finish**.
  - Double-click the icon created on the desktop to run the program.

## Uninstall

- 1 Access the uninstall page using the Control Panel or start-up programs menu. Click **Uninstall**.

- 2 After the program uninstall is complete, click **Close**.

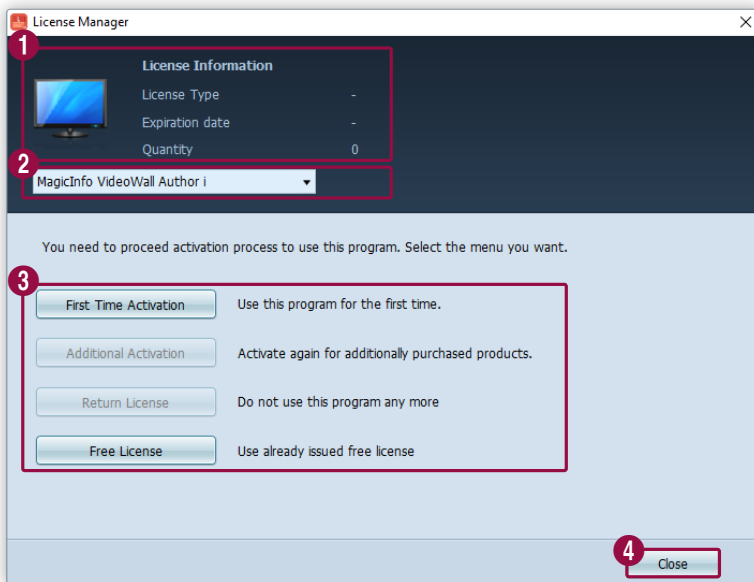

# Product License Registration

## Activating a Product License

Product license activation is required when running VideoWall Author for the first time after installation. To use the program, register the license key that came with the product or obtain a trial license key for free.

### Note

For details on returning or registering a license, refer to the following: [▶ Managing Licenses](#)

View information about a registered license.

- 1
  - **License Type:** Payment type of the license in use is shown: paid or free.
  - **Expiration date:** License expiration date is shown.

Select a player type to activate.

### Note

Make sure to activate a license for each player type before use.

Register or manage licenses using the following menu items.

- 3
  - **First Time Activation:** Click if you want to use the program by entering the license key that came with the product.
  - **Additional Activation:** Click if you want to activate licenses for purchased new devices.
  - **Return License:** Click if you want to return a full license activated for the program.
  - **Free License:** Click if you want to use the program by obtaining a trial license key for free.

- 4 Close the License Manager window.

## Registering a Full License

If a trial license has expired or if you want to use the program with a full license, register a valid license.

Users can register a license when running the program for the first time or when using it with a trial license.

- 1 Click **First Time Activation** from the License Manager window.
- 2 Enter user information.

The screenshot shows the License Manager window with the following elements:

- 1** Internet Connection: Radio buttons for  Connected and  Disconnected.
- 2** License Key: A text input field with a placeholder "License Key" and a link "Cannot find the license key?".
- 3** User Information: Fields for \* Company Name, \* Division, \* Address, \* Phone Number, and \* E-mail. A checkbox for "Agree to provide information" and a "Terms and Conditions" button are also present.
- Buttons: "Continue" and "Back" at the bottom right.

Select an Internet connection status.

- 1  **Note**
  - If not connected to the Internet, select **Disconnected** and then activate a license according to the on-screen instructions.
  - To register a license offline, access the license server (<https://v3.samsunggsbn.com>) and obtain an activation key.

- 2 Enter the new product license key.

- 3 Fill in the input fields required to activate a license. Select the **Agree to provide information** checkbox.
  - Click **Terms and Conditions** if you want to view the terms and conditions of use.

- 3 Click **Continue**.
- 4 Click **OK** in the displayed notification window that activation is complete.
- 5 Read the license information, and then click **Close**.

### Note

- If **Close** is clicked after a license is registered for the first time after program installation, the License Manager window will close and then the VideoWall Author program will start.
- If License Manager is run by selecting **Help > Register the license** from the VideoWall Author screen, clicking **Close** will not apply changes immediately. To apply changes, click **OK** and then run the program again.

## Registering a Trial License

If you have not purchased a full license, use the program by obtaining a trial license for free.

- 1 Click **Free License** from the License Manager window.
- 2 Enter user information.

Select an Internet connection status.

1

### Note

- If not connected to the Internet, select **Disconnected** and then activate a license according to the on-screen instructions.
- To register a license offline, access the license server (<https://v3.samsunggsbn.com>) and obtain an activation key.

2

A trial license key that can be used for free is displayed.

3

Fill in the input fields required to activate a license. Select the **Agree to provide information** checkbox.

- Click **Terms and Conditions** if you want to view the terms and conditions of use.

- 3 Click **Continue**.
- 4 Click **OK** in the displayed notification window that activation is complete.
- 5 Read the license information, and then click **Close**.

 **Note**

- If **Close** is clicked after a license is registered for the first time after program installation, the License Manager window will close and then the VideoWall Author program will start.
- If License Manager is run by selecting **Help > Register the license** from the VideoWall Author screen, clicking **Close** will not apply changes immediately. To apply changes, click **OK** and then run the program again.

## Managing Licenses

---

View information about licenses activated for the program or manage licenses by selecting **Help > Register the license** from the VideoWall Author screen.

Extend a license expiration date through additional activation. Return a license for the program in use, if required.

 **Note**

For details on how to activate licenses, refer to the following: [▶ Activating a Product License](#)

## Activating Additional Licenses

Register an additional license after extending a license expiration date or purchasing a new device, if required.

 **Note**

To extend the expiration date of a registered license, contact the dealer the product was purchased from or your local marketing representative to extend the expiration date.

- 1 Click **Additional Activation** from the License Manager window.
- 2 Select an Internet connection status, and then click **Continue**.

 **Note**

- If not connected to the Internet, select **Disconnected** and then activate a license according to the on-screen instructions.
- To register a license offline, access the license server (<https://v3.samsungsbn.com>) and obtain an activation key.

- 3 Click **OK** in the displayed notification window that activation is complete.
- 4 Read the license information, and then click **Close**.

 **Note**

To apply changes, restart the program.

## Returning a License

A license activated on a PC cannot be used from another PC.

A license can be returned if the activated program has been moved to another PC or if you do not want to use the program any longer.

### Note

It is not possible to return a trial license key.

### Caution

After a license is returned, all of the license information will be removed and the program will no longer be available for use. To use the program again, repeat the first time license activation process.

- 1 Click **Return License** from the License Manager window.
- 2 Select an Internet connection status, and then click **Continue**.

### Note

- If not connected to the Internet, select **Disconnected** and then return the license according to the on-screen instructions.
- To return a license offline, access the license server (<https://v3.samsungsbn.com>) and enter the license key.

- 3 Click **OK** in the displayed window to confirm returning of the license.
- 4 Click **OK** in the displayed notification window that the license has been returned.
- 5 Read the license information, and then click **Close**.

### Note

To apply changes, restart the program.

### Caution

Take extra precautions as follows when returning a license offline.

- A license that has not been returned properly cannot be used from another PC. Make sure to go to the license server (<https://v3.samsungsbn.com>) and enter the returned license to complete the returning process.
- If a license or activation key file is available, activate the license again using the **First Time Activation** menu and then proceed to the license returning process.
- If the license and activation key files are lost, contact the dealer the product was purchased from or your local marketing representative.

## Resolving License Activation Issues

If the License Manager window appears when using the program after registering a license, resolve the issue referring to the instructions below:

**Option 1** Check the license expiration date found in the license information.

- Running the program after the license has expired displays the License Manager window. If this is the case, contact the dealer the product was purchased from or your local marketing representative to activate an additional license.

### Note

For details on how to activate an additional license, refer to the following: [▶ Activating Additional Licenses](#)

**Option 2** Check the date set on the PC.

- An incorrect date may cause a problem when running the program. Change the date according to your current time zone and then run the program again.

**Option 3** If "-" is displayed in the license type and expiration date sections, the license activation information may have been removed.

- Register a license again using the **First Time Activation** or **Free License** menu.

# 02

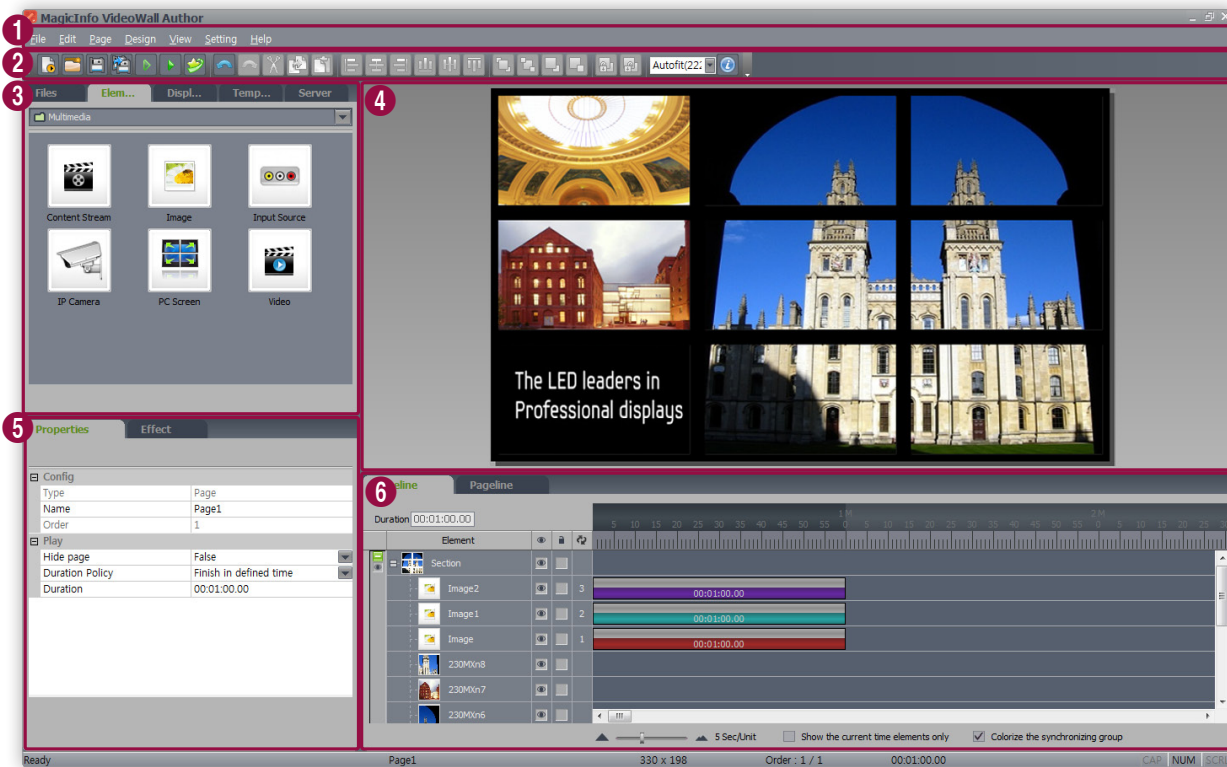

## About Author

### Author Main Page

Launch Author to display the following main page. From the main page, create VideoWall content using various functions provided in Author.

Change the content creation page layout to suit your preferences. For further details on changing the content creation page layout, refer to the following: [▶ Customizing the Author Screen Layout](#)

1 This is the menu bar. Clicking a menu option displays submenu options.

2 This is the toolbar. Frequently-used functions provided on the menu bar are displayed as icons on the toolbar. Clicking an icon runs the corresponding function.

Construct VideoWall content using various elements provided in Author. Conveniently insert elements from a tab into the editing window by simply dragging the elements.

- 3
- **File** tab: Browse and insert files saved on a PC into VideoWall content.
  - **Display Device** tab: Add display devices to use in **Informal** layout mode.
  - **Element** tab: Insert a wide variety of elements into VideoWall content.
  - **Server** tab: Import and reuse VideoWall content or elements that have been published to MagicInfo Server.
  - **Template** tab: Register and reuse frequently used VideoWall layouts as templates.

4 This is the design window where content can be edited. Edit VideoWall content by inserting elements, or preview edited content.

- 5
- **Property** tab: Configure the properties of a section, element and/or page selected from the editing window.
  - **Effect** tab: Apply various effects to inserted elements.

- 6
- **Timeline** tab: View or specify the playing time for each element of VideoWall content being created.
  - **Pageline** tab: Manage VideoWall content by page.

## VideoWall Content Creation Process

Briefly view the basic process of creating VideoWall content.

### Step 1: Creating VideoWall Content

Create VideoWall content using one of the following methods.

**Option 1** To create new VideoWall content, click **File > Create a new videowall** on the menu bar or click . Configure the content properties as desired. For further details on the content settings window, refer to the following: [▶ Creating New VideoWall Content](#)

**Option 2** To import and edit created VideoWall content, click **File > Open** on the menu bar or click .

**Option 3** To import and edit VideoWall content published to MagicInfo Server, click the **Server** tab > . Double-click the desired VideoWall content from the list. Refer to the following for further details. [▶ Importing VideoWall Content Published to Server](#)

## Step 2: Configuring the VideoWall layout

---

Configure the VideoWall layout to create content based on the layout.

The method to make VideoWall content depends on the selected VideoWall layout type (Formal or Informal). For further details on VideoWall layouts, refer to the following: [▶ Configuring the VideoWall layout](#)

### Note

It is possible to add pages to VideoWall content being created. The VideoWall layout of the first page is applied automatically to new pages. For further details on adding pages, refer to the following: [▶ Managing Pages](#)

## Step 3: Adding elements

---

Add different elements to a VideoWall layout to make content more creative. For further details on elements, refer to the following: [▶ Adding elements](#)

## Step 4: Configuring properties

---

Click a component of VideoWall content being created to configure the properties of the corresponding section or element, such as the location, playing time and effects. For further details on properties, refer to the following: [▶ Managing VideoWall Layout Properties, Configuring Element Properties](#)

## Step 5: Saving and publishing VideoWall content

---

Save or publish created VideoWall content to a local drive or the server respectively. For further details on saving or publishing content, refer to the following: [▶ Using VideoWall Content](#)

# Customizing the Author Screen Layout

Change the content creation page layout to suit your preferences. Relocate or resize windows and rearrange the toolbar for convenience.

## Note

This user guide is written based on the default layout settings.

## Rearranging the Tabs

---

Tabs are grouped by function. Rearrange the tabs if required.

Drag a tab left or right while clicking and holding down on the tab name to move the tab to a desired location.

## Separating a Tab Window

---

Tab windows are grouped by function. Separate a tab window as a new window if required.

Drag a tab window to a desired location while clicking and holding down on the tab name.

- The tab will be separated as a new window.

## Merging Windows

---

Merge separated windows into a tab. Group windows if required.

Drag a separated window to the tab menu bar while clicking and holding down on the tab name.

## Resizing Windows

---

Resize tab windows or the editing window if required.

Drag the edge of a tab window or the border of the editing window to adjust the size as desired.

## Rearranging the Toolbar

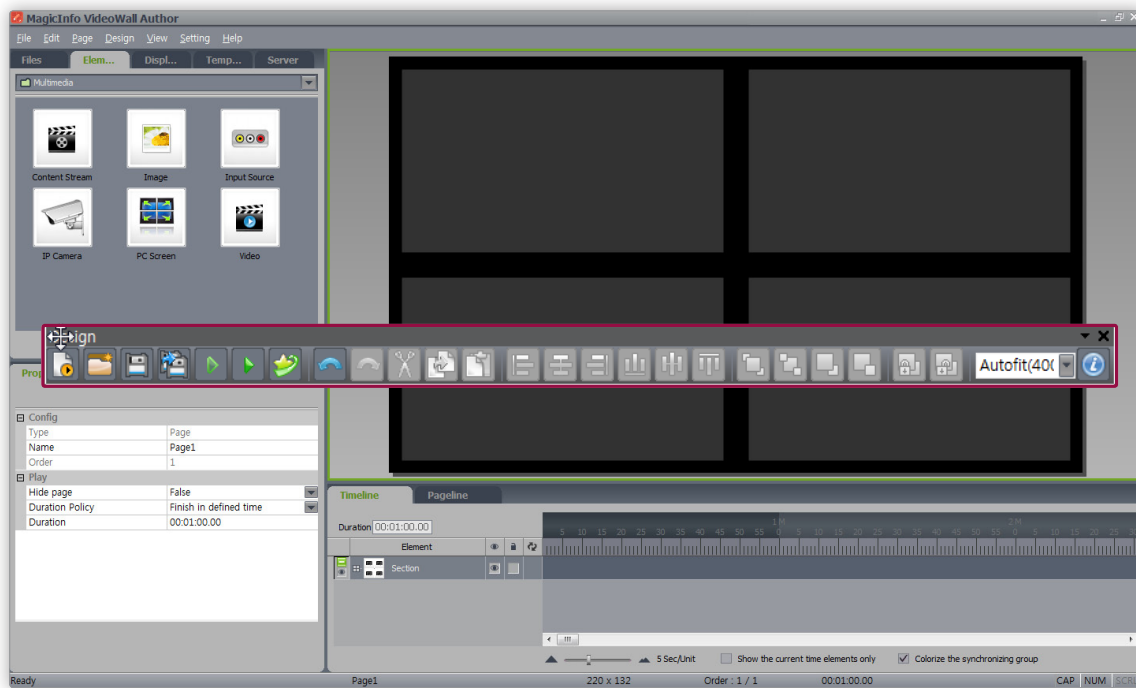

Separate or rearrange the toolbar for convenience if required.

Place the mouse cursor over  at the farthest left of the toolbar to change the mouse cursor to a four-way arrow. Drag the toolbar to a desired location.

- According to the drag direction, the toolbar will be fixed on the corresponding edge of the page as shown in the image.

- Dragging the toolbar to the center of the program screen will separate the toolbar as a new window. To resize a window, drag the edge of the window.

## Resetting the Screen Layout

Reset the customized screen layout to the default layout if required.

Click **View > Initialize layout** on the menu bar.

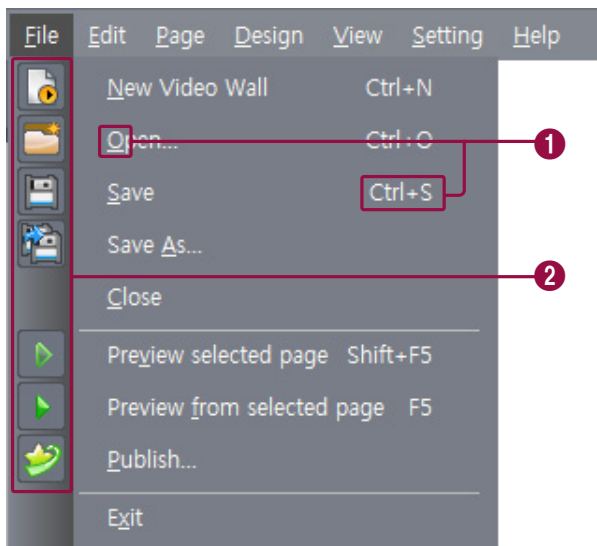

# More about the Features of Author

## Using the Menu Bar

Find out more about the functions provided on the top menu bar.

### Note

Some menu options may be disabled depending on the layout type (Formal or Informal) of VideoWall content being created.

- 1 This refers to a shortcut key. Pressing the key on the keyboard will run the corresponding function instantly.
- 2 These functions can be found in the toolbar. Clicking one of these icons on the toolbar will run the corresponding function.

## File Menu Options

<b>New Video Wall</b>	Create new VideoWall content. If this option is run when VideoWall content is being created, a confirmation prompt to save the content will appear.
<b>Open</b>	Import and edit previously created VideoWall content.
<b>Save</b>	Save VideoWall content being edited. For further details on saving VideoWall content, refer to the following: <a href="#">▶ Saving VideoWall Content</a>
<b>Save As</b>	Save VideoWall content being edited as another name. For further details on saving VideoWall content, refer to the following: <a href="#">▶ Saving VideoWall Content</a>
<b>Close</b>	<p>Close VideoWall content being created. If this option is run when VideoWall content is being created, a confirmation prompt to save the content will appear.</p> <p> <b>Note</b></p> <p>Closing VideoWall content will display the main page of Author.</p>
<b>Preview selected page</b>	Preview the selected page of edited VideoWall content before saving or publishing the content. <a href="#">▶ Previewing VideoWall Content</a>
<b>Preview from selected page</b>	Preview pages of edited VideoWall content starting from the selected page before saving or publishing the content. For further details on previewing, refer to the following: <a href="#">▶ Previewing VideoWall Content</a>
<b>Publish</b>	Convert created VideoWall content to create a file for publishing. Then, save the file to a PC or a removable disk, or publish the file to MagicInfo Server or Console.
<b>Exit</b>	Exit from the Author program. If this option is run when VideoWall content is being created, a confirmation prompt to save the content will appear.

## Edit Menu Options

---

<b>Undo</b>	Cancel the last task to return to the previous status.
<b>Redo</b>	Run the last canceled task again.
<b>Cut</b>	Cut the selected element.
<b>Copy</b>	Copy the selected element.
<b>Paste</b>	Paste a cut or copied element.
<b>Delete</b>	Delete the selected element.
<b>Select All</b>	Select all elements contained in the current page.
<b>Cancel Select All</b>	Deselect an element.

## Page Menu Options

---

<b>New Page</b>	Add pages to VideoWall content being created.
<b>Duplicate Page</b>	Copy the current page to add the same page.
<b>Delete Page</b>	Delete the selected page.
<b>Delete All Pages</b>	Delete all pages of VideoWall content being created.
<b>Edit Previous Page</b>	Go to the previous page right before the current page.
<b>Edit Next Page</b>	Go to the next page right after the current page.
<b>Edit First Page</b>	Go to the first page.
<b>Edit Last Page</b>	Go to the last page.
<b>Register Template</b>	Register the selected page layout as a template for reuse. Note that elements and effects added in the layout are not included in the registered template. For further details on templates, refer to the following: <a href="#">▶ Registering a Layout as a Template</a>

## Design Menu Options

<b>Order</b>	In <b>Informal</b> layout mode, it is possible to change the arrangement of display devices added to the editing window. For further details on the arrangement of devices, refer to the following: <a href="#">▶ Arranging Display Devices</a>
<b>Align</b>	In <b>Informal</b> layout mode, it is possible to change the alignment of display devices added to the editing window. For further details on device alignment criteria, refer to the following: <a href="#">▶ Aligning Display Devices</a>
<b>Group</b>	Group display devices to construct a unique layout. Ungroup devices if required. For further details on device groups, refer to the following: <a href="#">▶ Grouping Display Devices</a>

## View Menu Options

<b>File Window</b>	Display the <b>File</b> tab on the content creation page of Author.
<b>Element Window</b>	Display the <b>Element</b> tab on the content creation page of Author.
<b>Display Device Window</b>	Display the <b>Display Device</b> tab on the content creation page of Author.
<b>Template Window</b>	Display the <b>Template</b> tab on the content creation page of Author.
<b>Server Contents Window</b>	Display the <b>Server</b> tab on the content creation page of Author.
<b>Properties Window</b>	Display the <b>Properties</b> tab on the content creation page of Author.
<b>Effect Window</b>	Display the <b>Effect</b> tab on the content creation page of Author.
<b>Timeline Window</b>	Display the <b>Timeline</b> tab on the content creation page of Author.
<b>Pageline Window</b>	Display the <b>Pageline</b> tab on the content creation page of Author.
<b>Initialize Layout</b>	Reset the customized screen layout to the default layout if required. For further details on reconstructing the content creation page, refer to the following: <a href="#">▶ Customizing the Author Screen Layout</a>

### Note

If a tab window is displayed on the content creation page of Author, the corresponding option is disabled.

## Setting Menu Options

---

<b>Contents Setting</b>	View the basic settings for VideoWall content. It is possible to change the settings for some options if required.
<b>Option</b>	Configure the playback settings for VideoWall content, the settings for the server to publish content to, or the range to collect logs. For further details on option settings, refer to the following: <a href="#">▶ Configuring the Author System Settings</a>

## Help Menu Options

---

<b>Help</b>	View the Help information for Author.
<b>About MagicInfo VideoWall</b>	View the version and copyright information of Author.
<b>Register the license</b>	View and manage license information. Refer to the following for further details. <a href="#">▶ Managing Licenses</a>

## Using the Toolbar

Frequently-used functions provided on the menu bar are displayed as icons on the toolbar. Clicking an icon runs the corresponding function.

### Note

Separate or rearrange the toolbar for convenience if required. For further details on the toolbar, refer to the following: [▶ Rearranging the Toolbar](#)

## Editing the Toolbar Icons

---

Hide or display the default toolbar icons as desired.

- 1 Click  > **Add or Remove Buttons** on the toolbar.
- 2 Click a menu option to hide or display the corresponding icon on the toolbar.
  - If the checkbox of a menu option is selected, the corresponding icon is displayed on the toolbar.
  - To hide an icon on the toolbar, deselect the corresponding menu option checkbox.

## Initializing the toolbar

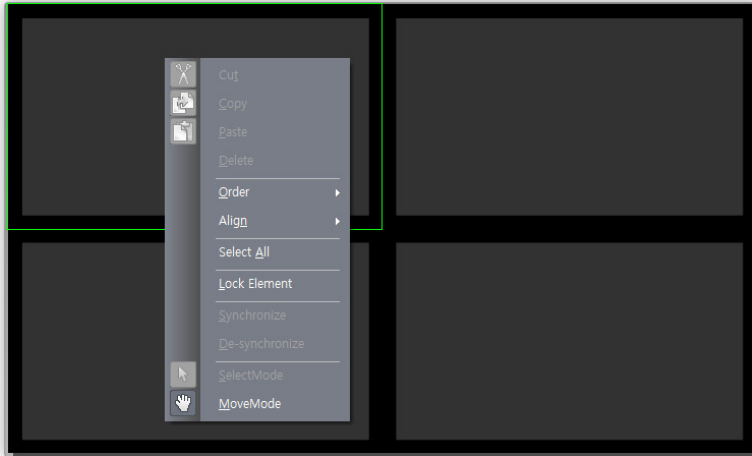

---

Reset the customized toolbar to the default mode if required.

Click  > **Reset Toolbar** on the toolbar.

## Shortcut Edit Menu Options

Right-click anywhere on the screen while editing content to open the context menu options used to edit. Displayed context menu options depend on the clicked section.

# Configuring the Author System Settings

Configure videowall content settings such as the playback settings, information about the server to distribute content to, the image split details and the range to collect records.

- 1 Click **Setting > Option** on the menu bar.
- 2 Configure the settings as desired.

<b>Design</b>	<ul style="list-style-type: none"> <li>▪ <b>Page:</b> Configure the basic playback settings for each page of VideoWall content.           <ul style="list-style-type: none"> <li>– <b>Page Duration:</b> Specify the default playback duration for each page.</li> <li>– <b>Page Duration Policy:</b> Specify the function you want to run after the specified default playback duration elapses.</li> </ul> </li> <li>▪ <b>Element:</b> Configure the basic playback settings for elements.           <ul style="list-style-type: none"> <li>– <b>Element Duration:</b> Specify the default playback duration for each element.</li> <li>– <b>Do not analyze information for the video file:</b> Select whether to analyze information of a video file when the file is imported. Analyzing file information while multiple video files are being imported simultaneously can cause use up a lot of memory. It is recommended to click and enable this option.</li> <li>– <b>Fill type of the videowall element to the screen:</b> Specify the criteria to automatically resize an element when the element is added. The size of an added element will automatically be adjusted according to the display device or panel size depending on the settings. The panel size does not include the bezel.</li> </ul> </li> <li>▪ <b>Working Directory:</b> Specify the default path of VideoWall content by condition.           <ul style="list-style-type: none"> <li>– <b>Working Directory:</b> Specify the folder to save VideoWall content or import saved VideoWall content.</li> <li>– <b>Empty Temporary Folder:</b> Delete the temporary storage folder created when VideoWall content is created.</li> <li>– <b>Default Local Videowall Publishing Path:</b> Specify the default destination folder to save files converted from VideoWall content for publishing.</li> </ul> </li> <li>▪ <b>Maximum number of Undo/Redo:</b> Specify the maximum number of undos or redos that can be applied when content is edited. Up to the specified number of changes are saved. To apply new settings, make sure to restart Author.</li> <li>▪ <b>Auto-save:</b> Select the checkbox to save VideoWall content currently being edited. Saving will occur automatically at specified time intervals.</li> </ul>
<b>Server</b>	<ul style="list-style-type: none"> <li>▪ <b>Address:</b> Specify the IP address of MagicInfo Server.</li> <li>▪ <b>HTTP Port:</b> Configure the HTTP or HTTPS port settings for MagicInfo Server.</li> <li>▪ <b>FTP Port:</b> Configure the FTP port settings and transfer mode for MagicInfo Server.</li> <li>▪ <b>Login ID:</b> Register an ID used to log in to MagicInfo Server.</li> <li>▪ <b>Login Password:</b> Register a password used to log in to MagicInfo Server.</li> </ul>

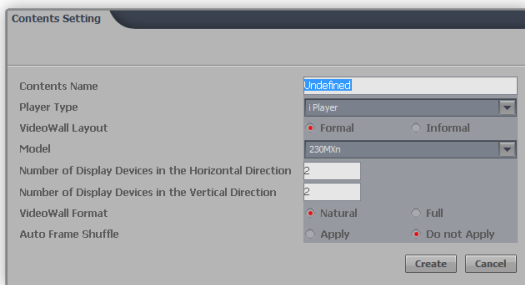

VW Divider	<ul style="list-style-type: none"> <li>▪ <b>Divide Option:</b> Enable/disable the image split feature and configure image split settings. <ul style="list-style-type: none"> <li>– <b>VW Divider Enable:</b> Enable or disable the image split feature.</li> <li>– <b>Force Transcoding:</b> Specify the maximum bitrate, width and height values to split an image based on the specified values.</li> </ul> </li> </ul> <p> <b>Note</b></p> <p>The maximum values cannot be edited if the Force Transcoding checkbox is selected. Enter the maximum values first before selecting the Force Transcoding checkbox..</p> <ul style="list-style-type: none"> <li>– <b>Maximum bitrate:</b> Specify the maximum bitrate value allowed when splitting an image. The value may be different from the actual bitrate of the split image.</li> <li>– <b>Maximum width:</b> Specify the maximum width value allowed when splitting an image. The value may be different from the actual width of the split image.</li> <li>– <b>Maximum height:</b> Specify the maximum height value allowed when splitting an image. The value may be different from the actual height of the split image.</li> </ul> <ul style="list-style-type: none"> <li>▪ <b>Output Settings:</b> Configure information to use when saving a split image. <ul style="list-style-type: none"> <li>– <b>Format:</b> Specify the format to save a split image.</li> <li>– <b>Bitrate:</b> Specify the bitrate value used to save a split image.</li> <li>– <b>Force CBR:</b> Enable the option to encode an image based on a specified bitrate value.</li> <li>– <b>2Pass-Encoding:</b> Enable the option to analyze the composition of a split image and then encode the image based on the composition.</li> </ul> </li> </ul>
Log	<ul style="list-style-type: none"> <li>▪ <b>Log Level:</b> Specify the range to collect logs of connections or content published from Author to MagicInfo Server. <ul style="list-style-type: none"> <li>– <b>Communication:</b> Specify the range to collect records of tasks performed in conjunction with MagicInfo Server.</li> <li>– <b>Packaging:</b> Specify the range to collect records of events that take place when VideoWall content is converted into a file for publishing.</li> <li>– <b>Upload:</b> Specify the range to collect records of events that take place when VideoWall content is uploaded to MagicInfo Server.</li> <li>– <b>General:</b> Specify the range to collect records of events that take place when VideoWall content is edited.</li> </ul> </li> </ul>

3 After configuring the required settings, click **OK**.

# Making VideoWall Content

## Creating New VideoWall Content

- 1 Click **File > New Video Wall** on the menu bar. Alternatively, click  to open the Contents Setting window.

- 2 Configure the VideoWall content properties.

<b>Contents Name</b>	Enter a new VideoWall content name.
<b>Player Type</b>	<p>Select a display device type that will play VideoWall content.</p> <ul style="list-style-type: none"> <li>▪ <b>i Player:</b> Select this option if using a standard display device.</li> <li>▪ <b>S Player:</b> Select this option if the display device is missing some functions. If this option is selected, some elements or effects may not be added to VideoWall content.</li> </ul>
<b>VideoWall Layout</b>	<p>Configure the layout of display devices that will make up a VideoWall.</p> <ul style="list-style-type: none"> <li>▪ <b>Formal:</b> Arrange display devices of a VideoWall according to a predefined layout such as 2X2 and 3X4. Note that display devices of the same model can only be used.</li> <li>▪ <b>Informal:</b> Freely arrange display devices according to a customized layout.</li> </ul>
<b>Model Name</b>	Select the type of display device used to construct a VideoWall layout in <b>Formal</b> layout mode. In <b>Informal</b> layout mode, display devices of different models can be used simultaneously. This option is disabled.

<b>Number of Monitors in the Horizontal Direction</b>	Enter the number of display devices that will be arranged in the horizontal row of a VideoWall in <b>Formal</b> layout mode. In <b>Informal</b> layout mode, display devices can be flexibly arranged and this option is disabled.
<b>Number of Monitors in the Vertical Direction</b>	Enter the number of display devices that will be arranged in the vertical column of a VideoWall in <b>Formal</b> layout mode. In <b>Informal</b> layout mode, display devices can be flexibly arranged and this option is disabled.
<b>VideoWall Format</b>	<p>Specify whether to adjust for the space of the bezels of display devices when displaying VideoWall content.</p> <ul style="list-style-type: none"> <li>▪ <b>Natural:</b> The bezels of display devices are adjusted for when elements are inserted. Although elements that overlap bezels are partially hidden, near seamless natural images are displayed.</li> <li>▪ <b>Full:</b> Bezels of display devices are not adjusted for when elements are inserted. Bezels that overlap elements create spaces as thick as the bezels in a displayed image. This may make the image look less natural.</li> </ul>
<b>Auto Frame Shuffle</b>	<p>Add the same element to every section of a videowall layout or add a different element to each section. Refer to the following for further details. <a href="#">▶ Auto Frame Shuffle</a></p> <ul style="list-style-type: none"> <li>▪ <b>Apply:</b> Play an element using various layouts.</li> <li>▪ <b>Do not Apply:</b> Play a different element in each of the sections.</li> </ul>

- 3 After configuring the required settings, click **Create**.
  - A new VideoWall content page appears on the editing window.

 **Note**

- To import and edit VideoWall content previously created, click **File > Open** on the menu bar or click .
- To import and edit VideoWall content published to MagicInfo Server, click the **Server** tab > . Double-click the desired VideoWall content from the list.

# Configuring the VideoWall layout

Configure the VideoWall layout to create content based on the layout.

The method to make VideoWall content depends on the selected VideoWall layout type (Formal or Informal). Select a layout from the Contents Setting window. [▶ Creating New VideoWall Content](#)

## Constructing a Formal Layout

Set VideoWall Layout to **Formal** from the Contents Setting window. VideoWall content is displayed in the predefined layout based on the specified number of display devices such as 2X2 and 3X4.

**Example** 3X3 predefined layout

### Note

- Display devices of the same model can only be used.
- It is not possible to add a display device while editing. Display devices cannot be relocated or rearranged. To change the number of display devices, click  to create new VideoWall content.
- In **Formal** layout mode, all display devices are set as a group by default. For further details on grouping, refer to the following: [▶ Aligning Display Devices](#)

## Constructing an Informal Layout

Set VideoWall Layout to **Informal** from the Contents Setting window to display a blank page. Add display devices that will make up a VideoWall, then arrange the display devices as desired.

- 1 Select the **Display Device** tab. Next, drag a display device to the editing window.
  - To add multiple display devices, drag the devices one after another.
  - To update the device list, click **Reload**.

- 2 Click an added display device to move the device to a desired location.

### Note

- Devices are arranged in the order they were added. For further details on the arrangement of devices, refer to the following: [▶ Arranging Display Devices](#)
- To select multiple display devices simultaneously, click the display devices while holding down the Ctrl key on the keyboard.

## Arranging Display Devices

In **Informal** layout mode, it is possible to change the arrangement of display devices added to the editing window.

- 1 Select a display device from the editing window.
- 2 Rearrange the device using one of the following methods.
  - Option 1** Click **Design > Order** on the menu bar. Select an arrangement order.
  - Option 2** Right-click in the editing window and select **Order**. Specify the arrangement order.
  - Option 3** Click an order icon () on the toolbar.

## Aligning Display Devices

In **Informal** layout mode, it is possible to change the alignment of display devices added to the editing window.

- 1 Select a display device from the editing window.
- 2 Align the device using one of the following methods.
  - Option 1** Click **Design > Align** on the menu bar. Specify the alignment criterion.
  - Option 2** Right-click in the editing window and select **Align**. Specify the alignment criterion.
  - Option 3** Click an alignment icon () on the toolbar.

### Note

It is possible to select multiple display devices and align them based on the same criterion.

## Managing Display Device Groups

Group display devices to construct a unique layout. Ungroup devices if required.

### Note

In **Formal** layout mode, all display devices are set as a group by default. To change the devices of a group, first ungroup the devices.

## Grouping Display Devices

Group specific display devices to use a larger display screen.

- 1 Click the display devices you want to group from the editing window.
  - To select multiple display devices simultaneously, click the devices while holding down the Ctrl key on the keyboard.

2 Group the devices using one of the following methods.

**Option 1** Click **Design > Group > Group** on the menu bar.

**Option 2** Right-click in the editing window and select **Group > Group**.

**Option 3** Click  on the toolbar.

#### Note

- The selected display devices are assigned to the same group.
- Grouped devices are recognized as a single device and can be used as a larger screen.

## Ungrouping Display Devices

Ungroup display devices to use them as separate devices.

1 Click grouped display devices from the editing window.

2 Ungroup the devices using one of the following methods.

**Option 1** Click **Design > Group > Ungroup** on the menu bar.

**Option 2** Right-click in the editing window and select **Group > Ungroup**.

**Option 3** Click  on the toolbar.

## Locking Display Devices

---

Lock the current arrangement and alignment of display devices to prevent the devices from being rearranged unintentionally while editing.

1 Select a display device from the editing window.

2 Lock the device using one of the following methods.

**Option 1** Right-click on the device in the editing window and select **Lock Element**.

**Option 2** Right-click on the device in the timeline window and select **Lock Element**.

**Option 3** From the detailed settings window, select the **Property tab > Lock Element > True**.

#### Note

It is not possible to change the properties of locked devices. To rearrange or change the properties of locked devices, click **Lock Element** once again to deselect the checkbox.

## Managing VideoWall Layout Properties

View or change the properties of a section or a display device if required.

### Note

A section is where elements are played. Each display device consists of one section. Display devices of a group share one section.

## Configuring Section Properties

- 1 Click a display device from the editing window.
  - The section of the device is highlighted with a solid light green line.
  - If a display device belonging to a group is selected, the group is highlighted as a section.
- 2 Click the **Property** tab from the detailed settings window.

<b>Config</b>	<ul style="list-style-type: none"> <li>▪ <b>Type:</b> View the selected item type (page, section, element or device). Selecting a section will display <b>Section</b>.</li> <li>▪ <b>Name:</b> View the selected section's name. To distinguish the selected section from other sections, change the name.</li> <li>▪ <b>Order:</b> View the order of the selected section. In <b>Formal</b> layout mode, sections are arranged in the order from top left to bottom right. In <b>Informal</b> layout mode, sections can be arranged in any customized order.</li> </ul>
<b>Location</b>	<ul style="list-style-type: none"> <li>▪ <b>Position X:</b> Specify the horizontal location of a section. Entering a location value will change the section location. In <b>Formal</b> layout mode, locations of display devices cannot be changed and this option is disabled.</li> <li>▪ <b>Position Y:</b> Specify the vertical location of a section. Entering a location value will change the section location. In <b>Formal</b> layout mode, locations of display devices cannot be changed and this option is disabled.</li> <li>▪ <b>Width:</b> View the width of a section. If the section of a display device belonging to a group is selected, the width of the group is displayed.</li> <li>▪ <b>Height:</b> View the height of a section. If the section of a display device belonging to a group is selected, the height of the group is displayed.</li> <li>▪ <b>Rotation:</b> Specify the rotation angle of the selected display device. Drag the scroll bar left or right to adjust the angle. In <b>Formal</b> layout mode, display devices cannot be rotated and this option is disabled.</li> </ul>
<b>Design Option</b>	<ul style="list-style-type: none"> <li>▪ <b>Lock Element:</b> Lock the current arrangement and alignment of display devices to prevent the devices from being rearranged unintentionally while editing. For further details on locking elements, refer to the following: <a href="#">▶ Locking Display Devices</a></li> </ul>

## Viewing Display Device Properties

- 1 Double-click a display device from the editing window. Alternatively, click a display device in a desired section from the **Timeline** tab.
  - The selected display device section is highlighted with a dotted light green line.
  - If a display device belonging to a group is selected, the group's section is highlighted with a dotted orange line.
- 2 Click the **Property** tab from the detailed settings window. View the device properties.

<b>Config</b>	<ul style="list-style-type: none"> <li>▪ <b>Type:</b> View the selected item type (page, section, element or device). Selecting a display device will display the corresponding model name.</li> <li>▪ <b>Name:</b> View the selected display device's name. To distinguish the device from other devices, change the name.</li> <li>▪ <b>Order:</b> View the order of the selected display device. In <b>Formal</b> layout mode, sections are arranged in the order from top left to bottom right. In <b>Informal</b> layout mode, sections can be arranged in any customized order.</li> </ul>
<b>Display Device</b>	<ul style="list-style-type: none"> <li>▪ <b>Model Name:</b> View the model name of the selected display device.</li> <li>▪ <b>Horizontal Resolution:</b> View the horizontal resolution of the selected display device.</li> <li>▪ <b>Vertical Resolution:</b> View the vertical resolution of the selected display device.</li> <li>▪ <b>Panel Horizontal Size:</b> View the width of the selected display device. The thickness of the left and right bezels is excluded from the width.</li> <li>▪ <b>Panel Vertical Size:</b> View the height of the selected display device. The thickness of the top and bottom bezels is excluded from the height.</li> <li>▪ <b>Bezel Top to Bottom Thickness:</b> View the thickness of the top and bottom bezels of the selected display device.</li> <li>▪ <b>Bezel Left to Right Thickness:</b> View the thickness of the left and right bezels of the selected display device.</li> </ul>
<b>Location</b>	<ul style="list-style-type: none"> <li>▪ <b>Position X:</b> Specify the horizontal location of a display device. Entering a location value will change the display location. In <b>Formal</b> layout mode, locations of display devices cannot be changed and this option is disabled.</li> <li>▪ <b>Position Y:</b> Specify the vertical location of a display device. Entering a location value will change the display location. In <b>Formal</b> layout mode, locations of display devices cannot be changed and this option is disabled.</li> <li>▪ <b>Width:</b> View the width of a display device. If a display device belonging to a group is selected, the width of the group is displayed.</li> <li>▪ <b>Height:</b> View the height of a display device. If a display device belonging to a group is selected, the height of the group is displayed.</li> <li>▪ <b>Rotation:</b> View the rotation angle of the selected display device.</li> </ul>

# Adding elements

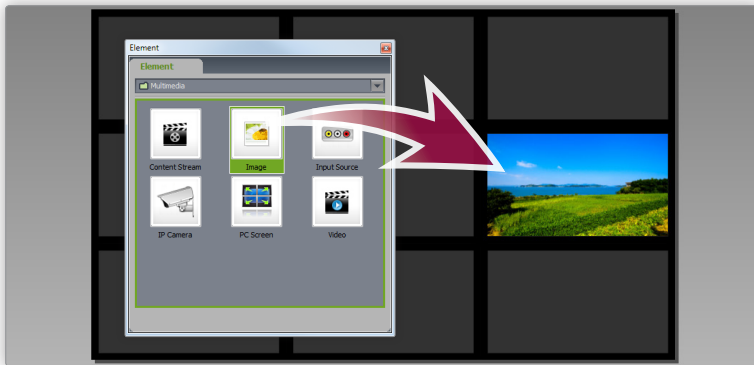

Make VideoWall content by inserting a wide variety of elements provided in Author. Author supports a convenient drag function. This allows you to insert elements with ease.

- 1 Select the **Element** tab.

<b>IP Camera</b>	Using Stream Repeater, play images from the IP camera on a VideoWall.
<b>PC Screen</b>	Using Live Caster, play the PC screen output on a VideoWall.
<b>Video</b>	Add video files (AVI, MPG, MPEG or WMA) to a VideoWall layout to play the files on the VideoWall.
<b>Content Stream</b>	Using the streaming server or Live Caster, play real-time streaming image data on a VideoWall.
<b>Input Source</b>	Play content from an external source device on a VideoWall. If an external input source is connected to a section where an element is already added, elements from the input source will always play first.
<b>Image</b>	Add image files saved on a PC to a VideoWall layout and play the files on the VideoWall.

- 2 Drag an element icon to a section in the editing window while clicking and holding down on the icon.

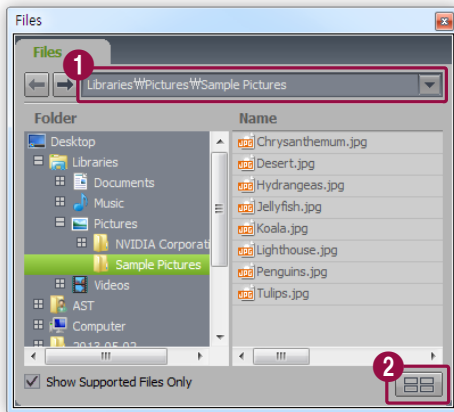

- Note that you will be prompted to select an element file if **Image** or **Video** is selected. The file selection window appears automatically. Select an element from the window.
  - The element is added to the corresponding section.
  - If the section of a device belonging to a group is selected, the element is added to the group's section.
- 3 Double-click the section where the element has been added. Specify the element size and location.
  - 4 Configure the element properties.
    - For further details on element properties, refer to the following: [▶ Configuring Element Properties](#)
  - 5 To add another element, repeat steps 1 through 4.
    - It is possible to add multiple elements to a single section.

## Browsing and Adding Files

Browse image or video files saved on a PC to insert them into VideoWall content.

- 1 Select the **File** tab.
- 2 Drag a file from the desired folder to a section in the editing window.
  - To browse only files that are supported in Author, click the checkbox for **Show Supported Files Only**.

- 1 Click  to display a list of folders that have been accessed.

Click the icon repeatedly to change the mode to view the file list.

- 2
  - : View files as thumbnails.
  - : View files as a list.

## Adding Elements Published to the Server

Import and reuse elements contained in VideoWall content that has been published to MagicInfo Server.

### ⚠ Caution

To add elements published to MagicInfo Server, make sure Author is connected to the Internet and MagicInfo Server. For further details on the server settings, refer to the following: [▶ Configuring the Author System Settings](#)

- 1 Select the **Server** tab.
- 2 Click .
  - VideoWall content published to MagicInfo Server will appear as a list.
- 3 Drag an element from the list to a section in the editing window.
  - Select a file transfer method from the dropdown list at the bottom left. This allows you to display only the VideoWall content items published using the selected method.
  - To update the list, click **Reload**.

- 4 Click **OK** in the displayed confirmation window.
  - The element will be inserted into the section.

### 📝 Note

If you drag a VWL file instead of an element from the list to the editing window, the corresponding VideoWall content will run on the editing window. Refer to the following for further details. [▶ Importing VideoWall Content Published to Server](#)

## Configuring Element Properties

Select an element added in a VideoWall layout to configure the element properties.

### Configuring Common Properties

Common properties refer to properties that can be configured regardless of the element type.

For further details on individual properties that vary depending on the element type, refer to the following: [▶ Configuring Individual Properties](#)

- 1 From the editing window, double-click a section that has an element.
  - The element added in the section is highlighted with a solid light green line.
- 2 Click the **Property** tab from the detailed settings window.

<b>Config</b>	<ul style="list-style-type: none"> <li>▪ <b>Type:</b> View the selected element type.</li> <li>▪ <b>Name:</b> View the selected element name. To distinguish the element from other elements, change the name.</li> <li>▪ <b>Order:</b> View the playing order of the selected element. In <b>Formal</b> layout mode, elements are arranged in the order from top left to bottom right. In <b>Informal</b> layout mode, elements can be arranged in any customized order.</li> </ul>
<b>Location</b>	<ul style="list-style-type: none"> <li>▪ <b>Position X:</b> Specify the horizontal location of an element. Entering a location value will change the element location.</li> <li>▪ <b>Position Y:</b> Specify the vertical location of an element. Entering a location value will change the element location.</li> <li>▪ <b>Width:</b> Specify the width of an element. If an element is larger than the section's width, part of the element may be hidden.</li> <li>▪ <b>Height:</b> Specify the height of an element. If an element is larger than the section's height, part of the element may be hidden.</li> </ul>
<b>Play</b>	<ul style="list-style-type: none"> <li>▪ <b>Synchronizing group ID:</b> View an identifier number that shows whether elements are assigned to a syncing group. Elements assigned to a syncing group are synced when VideoWall content is played.</li> <li>▪ <b>Start Time:</b> Specify the time to start playback of an element.</li> <li>▪ <b>Duration:</b> Specify the duration to play an element.</li> </ul>

<p><b>In Effect</b></p>	<ul style="list-style-type: none"> <li>▪ <b>Incoming Effect Name:</b> Select an effect to apply when playback starts for an element. Select an effect from the dropdown menu.</li> <li>▪ <b>Incoming Effect Duration:</b> Specify the duration to display an In Effect on a display device.</li> <li>▪ <b>Incoming Effect Direction:</b> Specify the direction to display an In Effect on a display device.</li> <li>▪ <b>Incoming effect delay time:</b> Specify the time interval between display devices when applying an In Effect to a VideoWall.</li> <li>▪ <b>Incoming effect delay direction:</b> Specify the direction to apply an In Effect to a VideoWall.</li> <li>▪ <b>Effect division:</b> Split the screen to apply an In Effect to the divided screens.</li> </ul>
<p><b>Out Effect</b></p>	<ul style="list-style-type: none"> <li>▪ <b>Outgoing Effect Name:</b> Select an effect to apply when playback ends for an element. Select an effect from the dropdown menu.</li> <li>▪ <b>Outgoing Effect Duration:</b> Specify the duration to display an Out Effect on a display device.</li> <li>▪ <b>Outgoing Effect Direction:</b> Specify the direction to display an Out Effect on a display device.</li> <li>▪ <b>Outgoing effect delay time:</b> Specify the time interval between display devices when displaying an Out Effect on a VideoWall.</li> <li>▪ <b>Outgoing effect delay direction:</b> Specify the direction to display an Out Effect on a VideoWall.</li> <li>▪ <b>Effect division:</b> Split the screen to apply an Out Effect to the divided screens.</li> </ul>
<p><b>Design Option</b></p>	<ul style="list-style-type: none"> <li>▪ <b>Lock Element:</b> Lock the current arrangement and alignment of display devices to prevent the devices from being rearranged unintentionally while editing. For further details on locking elements, refer to the following: <a href="#">▶ Locking Display Devices</a></li> <li>▪ <b>Canvas Visible:</b> Show or hide an element on the editing window. If the mode is disabled, the corresponding element is hidden on the editing window and the element editing status cannot be viewed.</li> </ul>

## Applying Effects to Elements

Apply a variety of in effects (In Effect) or out effects (Out Effect) to elements.

- 1 Select an element from the editing window.
- 2 Select the **Effect** tab.
- 3 Select an effect from the dropdown list.

<b>3D</b>	<ul style="list-style-type: none"> <li>▪ <b>AMSpinFade:</b> Make an element appear or disappear rotating around a specified axis when VideoWall content is played.</li> </ul>
<b>Fly On</b>	<ul style="list-style-type: none"> <li>▪ <b>Dissolve:</b> Make an element appear or disappear in a specified direction when VideoWall content is played.</li> </ul>
<b>Push</b>	<ul style="list-style-type: none"> <li>▪ <b>PushMe:</b> Make an element appear or disappear in a specified direction as if flowing in or out of split screens when VideoWall content is played.</li> </ul>
<b>Reveal</b>	<ul style="list-style-type: none"> <li>▪ <b>BlindsFantasy3:</b> Make an element appear or disappear as if a horizontal or vertical window shade is being rolled up or down when VideoWall content is played.</li> <li>▪ <b>Blocks:</b> Make an element appear or disappear according to the number of split screens and the time interval between the screens.</li> </ul>

## Configuring Individual Properties

Configure individual properties that vary depending on the selected element type.

### Configuring IP Camera properties

Configure the properties of the IP camera and Stream Repeater used to send the IP camera display output.

Stream Repeater	<ul style="list-style-type: none"> <li>▪ <b>Port:</b> Enter the connection port of the Stream Repeater.</li> <li>▪ <b>IP Address:</b> Enter the IP address of the Stream Repeater.</li> </ul>
IP Camera	<ul style="list-style-type: none"> <li>▪ <b>IP Address:</b> Enter the IP address of the IP camera connected to the Stream Repeater.</li> </ul>

### Configuring PC Screen properties

Configure the properties of the Live Caster used to send the PC screen output.

Live Caster	<ul style="list-style-type: none"> <li>▪ <b>Port:</b> Enter the connection port of the Live Caster.</li> <li>▪ <b>IP Address:</b> Enter the IP address of the Live Caster.</li> </ul>
-------------	---

### Configuring Video properties

View the path and size of a video file. Configure the file playback time settings.

Video	<ul style="list-style-type: none"> <li>▪ <b>Video File:</b> View the path and name of an imported video file. To change the video file, click .</li> </ul>
Clipping	<ul style="list-style-type: none"> <li>▪ <b>Original Width:</b> View the width of an original video file in pixels.</li> <li>▪ <b>Original Height:</b> View the height of an original video file in pixels.</li> <li>▪ <b>Original Duration:</b> View the playing duration of an original video file.</li> <li>▪ <b>Clipping Start Time:</b> Specify the playback start time for a video file.</li> <li>▪ <b>Clipping End Time:</b> Specify the playback end time for a video file.</li> </ul>

### Configuring Stream Content properties

Configure the properties of real-time streaming image data.

<b>Content Stream</b>	<ul style="list-style-type: none"> <li>▪ <b>Stream source:</b> Select a server type (Stream Server or Live Caster) used to transfer a streaming source to a VideoWall.</li> <li>▪ <b>Port:</b> Enter the port used to transfer image data.</li> <li>▪ <b>IP Address:</b> Enter the IP address used to transfer image data.</li> <li>▪ <b>Volume:</b> Adjust the sound volume of the image data you want to transfer to VideoWall devices.</li> </ul>
-----------------------	--

### Configuring Input Source properties

Configure the properties of a source device.

<b>Input Source</b>	<ul style="list-style-type: none"> <li>▪ <b>Input Type:</b> Select the type of the input source you want to connect. Input source types supported in Author include S-Video, Component, AV, PC, DVI, BNC, HDMI, ATV, TV, HDMI2, and DisplayPort.</li> <li>▪ <b>MDC VideoWall Mode:</b> Display an external input element on a single display device or multiple display devices simultaneously.</li> </ul>
---------------------	--

### Configuring Image properties

View the path or original file size of an image file.

<b>Image</b>	<ul style="list-style-type: none"> <li>▪ <b>Image File:</b> View the path and name of an imported image file. To change the video file, click .</li> </ul>
<b>Clipping</b>	<ul style="list-style-type: none"> <li>▪ <b>Original Width:</b> View the width of an original video file in pixels.</li> <li>▪ <b>Original Height:</b> View the height of an original video file in pixels.</li> </ul>

# Editing VideoWall Content

## Auto Frame Shuffle

When creating videowall content, it is possible to add the same element to all sections of a videowall layout using the **Auto Frame Shuffle** feature. Assign different properties to sections in a videowall content page. This allows the Auto Frame Shuffle function to be used more efficiently.

### Note

Auto Frame Shuffle mode can only be configured when new videowall content is created and cannot be changed when content is being edited. Refer to the following for further details. [▶ Creating New VideoWall Content](#)

- 1 Open a videowall layout that has the Auto Frame Shuffle feature applied.
- 2 Group and arrange display devices using a desired layout.
  - For further details on grouping devices, refer to the following: [▶ Grouping Display Devices](#)
  - To construct VideoWall content using multiple pages of different layouts, add pages. For further details on adding pages, refer to the following: [▶ Managing Pages](#)

Layout example 1

Layout example 2

Layout example 3

- 3 Add an element to a section.
  - The element will be added to all sections regardless of the selected section's location.
  - If the VideoWall content contains multiple pages, the element will be applied to all the pages.

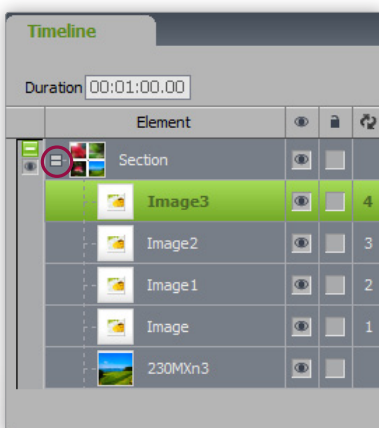

## Configuring the Element Playback Time Settings

Using Timeline, view the element playback duration by section for VideoWall content being created. Adjust the playback duration of an individual element if required.

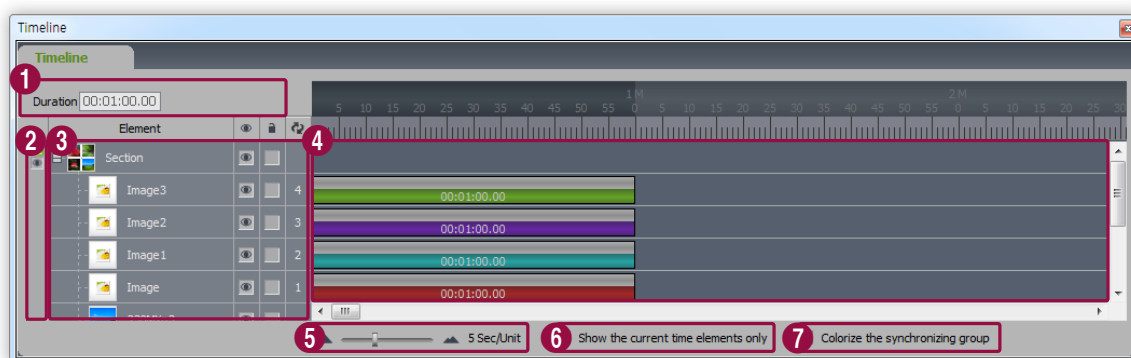

### Note

A section is where elements are played. Each display device consists of one section. Display devices of a group share one section.

- 1 Select the **Timeline** tab.
- 2 Select an element from the list under a section.
  - If the list is not shown under a section, click the icon +. The list will be unfolded.

## 3 Specify the playback duration for each element using a variety of Timeline functions.

1 Specify the playback duration for the current page.

- 2
  - / ■+ : Display or hide a section or the list under a section.
  - 👁 : Show or hide elements in the current page on the editing window.

View devices or elements that form a section.

- 3
  - +/- : Show or hide the list under a section.
  - 👁 : Show or hide the selected element on VideoWall content.
  - 🔒 : Fix the selected element to the current location. For further details on fixing an element to a certain location, refer to the following: [▶ Auto Frame Shuffle](#)
  - 🔄 : A number displayed under this icon indicates that the corresponding element is assigned to a syncing group. Elements assigned to a syncing group are played simultaneously when VideoWall content is played. For further details on creating a syncing group, refer to the following: [▶ Creating a Syncing Group](#)

### Note

To change the order of an element on the list under a section, drag the element up or down.

Each bar shows the playback duration of an element contained in a section.

- 4 Drag a bar to change the start time for an element. To adjust the playback duration for an element, drag the edge of the bar.

The slider adjusts the ruler unit which is used to specify the playback duration. Drag the slider left or right to adjust the unit of the ruler displayed on the timeline section between the range 0.01 seconds and 10 minutes. Narrower intervals on the ruler allow you to specify the playback duration of an element more precisely. Wider intervals allow you to view the playback duration (a maximum of 24 hours) more easily.

- 5
- 6 Make only the elements assigned to a certain location appear on the editing window. Click the checkbox and select a timeslot from the timeline section. Only the elements set to play in the selected timeslot will appear on the editing window.

- 7 Distinguish elements assigned to a syncing group from other elements by filling their playback duration bars with the same color if required. For further details on creating a syncing group, refer to the following: [▶ Creating a Syncing Group](#)

# Grouping Elements by Section

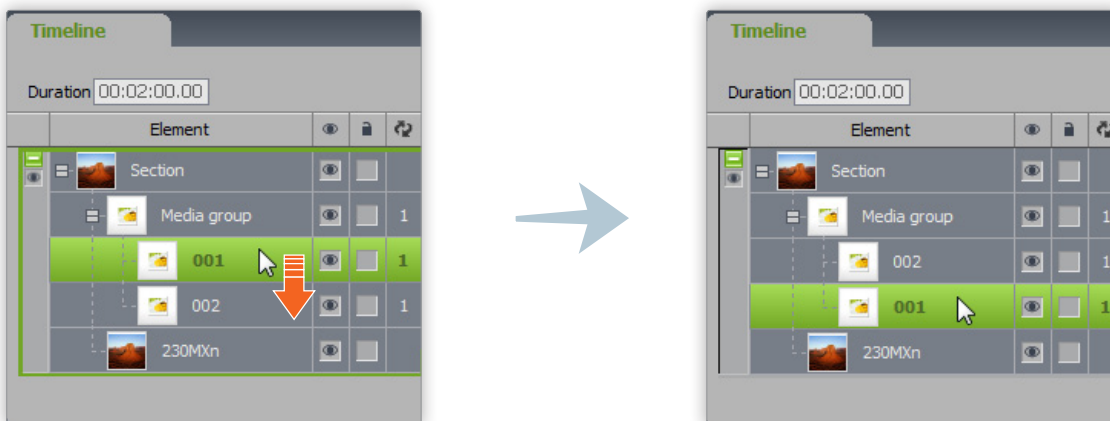

Group elements in the same section to manage the elements conveniently.

## Managing a Media group

If multiple elements are added to a section, the elements are set as a media group. Elements belonging to a media group can be played sequentially.

- 1 Add an element to the desired section.
- 2 Click the added element, then add more elements to the same section.
  - To create a media group, first make sure to select an element added in a section before adding more elements.
- 3 Click **Media group** from the timeline section.
  - Elements added in the section will appear.
- 4 View the playing order of each element from the Media group list.
  - Elements are played sequentially from bottom to top.
  - To change the playing order, drag the desired element from the Media group list to a new location.

**Example** Making 002 play before 001 in a section

## Managing Syncing Groups

---

### Creating a Syncing Group

Assign elements in the same section to a syncing group if required. Elements assigned to a syncing group are played simultaneously when VideoWall content is played.

- 1 Add an element to the desired section.
- 2 Add multiple elements to a section.
- 3 Select a section from the **Timeline** tab.
  - Elements added in the section will appear.
- 4 Select elements from the list under a section. Right-click and select **Synchronize**.
  - The selected elements are assigned to the same syncing group.

### Ungrouping a Syncing Group

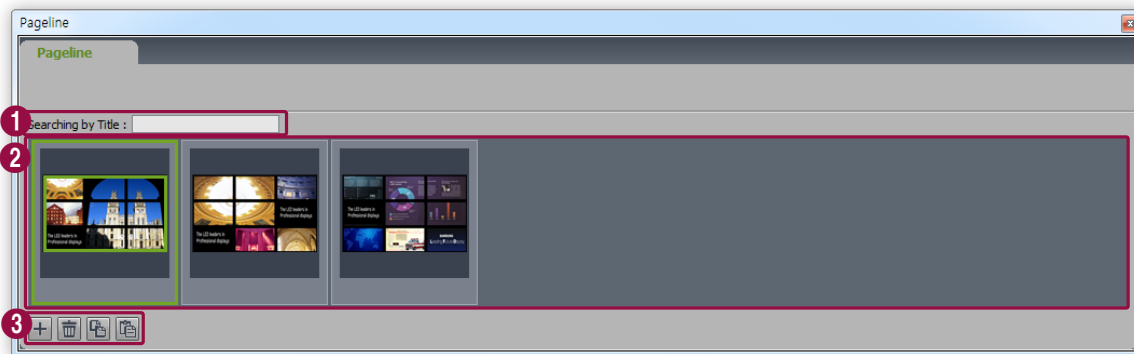

Ungroup a syncing group to manage the elements individually if required.

Right-click on an element of a syncing group from the **Timeline** tab, and select **De-synchronize**.

# Managing Pages

Using Pageline, add or delete pages in VideoWall content. Manage content by page.

- 1 Select the **Pageline** tab.
- 2 Manage pages using the functions as follows.

- 1 Enter a page title to search for the page.

All pages of VideoWall content are displayed as thumbnails. Place the mouse cursor on a page to view the page information.

- 2  **Note**

To change the order of a page, drag the page to a desired location.

- 3
    -  : Add a new page. A page that has the same layout as the VideoWall content currently being created is added. The layout cannot be changed. In **Informal** layout mode, it is not possible to rearrange display devices after adding a new page.
    -  : Delete the selected page. Elements contained in the page will also be deleted.
    -  : Copy the selected page. Elements contained in the page will also be copied.
    -  : Paste a copied page.

## Configuring Page Properties

- 1 Select a page from the **Pageline** tab.
- 2 Configure the page properties from the **Property** tab.

<b>Config</b>	<ul style="list-style-type: none"> <li>▪ <b>Type:</b> View the selected item type (page, section, element or device). Selecting a page will display <b>Page</b>.</li> <li>▪ <b>Name:</b> View a page title. To distinguish the page from other pages, change the title.</li> <li>▪ <b>Order:</b> View the playing order of the selected page.</li> </ul>
<b>Play</b>	<ul style="list-style-type: none"> <li>▪ <b>Add or Remove Buttons:</b> Display or hide the selected page when VideoWall content is playing. Hidden pages will not play.</li> <li>▪ <b>Duration Policy:</b> Configure the criteria to stop playback of the selected page when the playback end time for the page is different from the playback end time for an inserted element.</li> <li>▪ <b>Duration:</b> Specify the playback duration for the selected page.</li> </ul>

## Using Templates

Use VideoWall layouts as templates.

### Registering a Layout as a Template

Register and reuse frequently used VideoWall layouts as templates.

- 1 Construct a VideoWall layout from the editing window.
- 2 Register the layout as a template using one of the following methods.
  - Option 1** Select **Page > Register template** on the menu bar.
  - Option 2** Select the **Pageline** tab. Right-click on a page and select **Register template**.
- 3 Select a destination folder to save the template, and click **OK**.
  - To add a new folder, click  > .
- 4 Click **OK** in the displayed confirmation window.
  - The selected page layout will be registered as a template. Note that elements and effects contained in the page will not be included in the registered template.
  - Registered templates can be found in the **Template** tab.

## Importing Templates

---

Import a saved template to apply it to new VideoWall content.

- 1 Select the **Template** tab.

- 2 Select a folder from the dropdown list.
- 3 Double-click a desired template.
  - A new VideoWall content file that has the selected template's VideoWall layout will be opened in the editing window.
  - If VideoWall content is displayed in the editing window, a confirmation prompt to save the content will appear.

# Importing VideoWall Content Published to Server

Import and edit VideoWall content that has been published to MagicInfo Server if required.

## ⚠ Caution

To add elements published to MagicInfo Server, make sure Author is connected to the Internet and MagicInfo Server. For further details on the server settings, refer to the following: [▶ Configuring the Author System Settings](#)

- 1 Select the **Server** tab.
- 2 Click .
  - VideoWall content published to MagicInfo Server will appear as a list.
- 3 Double-click a VWL file on the list.
  - Select a file transfer method from the dropdown list at the bottom left. This allows you to display only the VideoWall content items published using the selected method.
  - To update the list, click **Reload**.

- 4 Click **OK** in the displayed confirmation window.
  - The corresponding VideoWall content runs on the editing window.
  - If VideoWall content is displayed in the editing window, a confirmation prompt to save the content will appear.

## 📝 Note

If you drag an element instead of a VWL file from the list to a section in the editing window, only the element will be inserted into the section. Refer to the following for further details. [▶ Adding Elements Published to the Server](#)

# Using VideoWall Content

## Previewing VideoWall Content

Preview edited VideoWall content before saving or publishing the content.

- 1 Click  on the toolbar.
  - If VideoWall content has multiple pages and you want to view all the pages starting from the current page, click  on the toolbar.
  - The preview page is displayed in full screen to play the content according to a specified playback duration.
- 2 To close the preview page, press ESC on the keyboard.
  - The Author editing page will appear.

### Note

If you place the mouse cursor at the bottom of the preview page, the playback control bar appears. Control the playback status using icons on the bar.

- : Pause the currently playing VideoWall content.
- : Play VideoWall content.
- : Go to the previous page.
- : Play content slower than the default speed. Note that the playing speed temporarily decreases in the preview page only. The actual playing time is not affected.
- : Play content faster than the default speed. Note that the playing speed temporarily decreases in the preview page only. The actual playing time is not affected.
- : Go to the next page.

# Saving VideoWall Content

Save VideoWall content being edited.

- 1 Click **File** > **Save** on the menu bar or click .
- 2 Enter a file name, and click **Save**.

## Note

- A saved VideoWall content file cannot be published to VideoWall devices. To publish VideoWall content to VideoWall devices, convert the content to create a valid file for publishing.
- If you move a saved VideoWall content file to another folder or change the folder name, elements contained in the file may not function properly when the file runs.

# Splitting a videowall content image

Split a videowall content image based on a desired videowall layout using the image split feature, if required.

## Note

- The image split feature is only available for videowall content that contains a video.
- If the videowall content you want to split is using an informal layout, set all the connected display devices as a group. Refer to the following for further details. [▶ Managing Display Device Groups](#)

- 1 Click **Setting** > **Option** > **VW Divider** > **Divide Option** on the menu bar and then select the **VW Divider Enable** checkbox. Refer to the following for further details. [▶ Configuring the Author System Settings](#)
- 2 Configure detailed settings used to split the image.
  - For further details on configuring image split settings, refer to the following: [▶ VW Divider](#)
  - After configuring detailed settings, distribute the videowall content. The content image will be split based on the settings.

# Creating a File for Publishing

Convert created VideoWall content to create a file that can be played on VideoWall devices. Then, save the file to a PC or a removable disk.

## Saving a Converted File to a PC

---

- 1 Click **File > Publish** on the menu bar or click .
  - A split window will appear if the image split feature is enabled. After the image is split, click **OK**.
- 2 From the displayed Publish Job window, click  or  in the **Location** section to specify the destination folder to save the file. Click **Publish**.
  - VideoWall content will be saved as a file for publishing in the specified folder.

## Saving a Converted File to a Removable Disk

---

- 1 Click **File > Publish** on the menu bar or click .
  - A split window will appear if the image split feature is enabled. After the image is split, click **OK**.
- 2 From the displayed Publish Job window, set **Protocol** to **Local** using the **Upload Target** pull-down menu.
- 3 Click the **Upload** checkbox in the **Option** section.
  - To share a saved file for publishing with other users, click the **Share** checkbox.
- 4 Click  or  next to **Category** to specify the path of the removable disk you want to save the file for publishing. Click **Publish**.
  - VideoWall content will be saved as a file for publishing in the specified folder.

### Note

Connect the removable disk containing VideoWall content to the PC where Console is installed. This allows you to play the content directly from the removable disk.

# Publishing VideoWall Content

Publish and play created VideoWall content as follows.

## Publishing Content to MagicInfo Server

---

Publish created VideoWall content to MagicInfo Server as follows.

- 1 Click **File > Publish** on the menu bar or click .
  - A split window will appear if the image split feature is enabled. After the image is split, click **OK**.
- 2 From the displayed Publish Job window, set **Protocol** to **HTTP** or **FTP** using the **Upload Target** pull-down menu.
- 3 Enter the IP address in the **Address** input field. Enter the port number in the **HTTP Port** or **FTP Port** input field.
- 4 Fill in the **ID** and **Password** input fields in the Login section.
- 5 Click the **Upload** checkbox in the **Option** section.
  - To share a published file with other users, click the **Share** checkbox.
- 6 Click **Publish**.
  - The VideoWall content will be published to MagicInfo Server.

### Note

If the IP address, login ID and password for MagicInfo Server are specified in the Option menu, the corresponding information will be entered automatically.

## Confirming Successful Content Publishing to MagicInfo Server

Confirm that published VideoWall content has been added to MagicInfo Server properly.

- 1 Click the **Server** tab.
- 2 Confirm that the published VideoWall content is found in the file list.
  - To update the file list, click **Reload**.

## Publishing Content to Console

---

Publish created VideoWall content to Console.

### Note

To publish VideoWall content created in Author to Console, make sure the Console is installed on the PC where Author is installed.

- 1 Click **File > Publish** on the menu bar or click .
  - A split window will appear if the image split feature is enabled. After the image is split, click **OK**.
- 2 From the displayed Publish Job window, set **Protocol** to **Console** using the **Upload Target** pull-down menu.
- 3 Click the **Upload** checkbox in the **Option** section.
  - The path of the destination folder to save the VideoWall content will be displayed in the **Category** input field. The path is specified automatically and cannot be changed.
- 4 Click **Publish**.
  - The VideoWall content will be published to Console. The published VideoWall content will be saved under a folder created automatically using an internal identifier as the file name.
