

Creation by using the text style

After importing three different text style templates among W Player dedicated contents, you can create text with various cool effects.

Under the main tab, click  (Text) and then click a desired text style in the sub menu, **Text Style**, or drag it onto the canvas.

Style	Style name	Description
	Glossy Gradation style	Text can have both gradation and light effects at the same time as well as the animation effect with moving colors. To adjust the gradation color and animation speed, click  (Text Color) in the toolbar at the top.
	Neon style	The text has neon and blinking animation effects.
	Reflection style	Soft reflection effect can be represented as if floating on the water. To set the height of reflection, click  (Text Color).

Configuration tools for text element details

Let us take a look at the properties of the text elements that can be expressed in W Player among Web Author functions.

 **Note**

For detailed setting tools for commonly used text elements, refer to the following. [Configuration tools for text element details](#)

Tools	Tool name	Description
	Character Space	Adjust spacing between characters.
	Shadow	Apply the shadow effect to the text box.
	Border Radius	Set the curvature value in the corner of the text box. To apply the curvature values differently for each corner, uncheck in Link Together .
